Precision Power Management

Smart Fuel Efficiency APP

Precision Drilling's Power Management App interfaces Alpha™ directly with each Generator to provide the operator with real-time fuel consumption, power utilization and engine data for maintenance and engine warnings. The system is programed to the driller's specifications and can be configured based on load requirements.

Fuel Savings

Improved insight into fuel consumption allows the operator to make smarter decision about how fuel is consumed by the rig, which generators are online and how to deliver the optimal power while minimizing fuel consumption. Daily, weekly and yearly trend plots help visualize fuel consumption instantly.

Improved Performance

Properly loaded generators provide better fuel efficiency. The Precision Drilling Power Management App helps to ensure that the rig is running at the best available power levels to provide efficient power. Less runtime hours will result in reduced engine maintenance and engine consumables.

Eco-Conscious

Fewer generators online equates to reduced fuel costs and a reduced carbon foot print. Less engine hours result in less carbon emissions aiding in reducing greenhouse gases.
