

FIS CHEMICALS ACQUIRES IP, STOCK & MANUFACTURING RIGHTS TO BLUE STEEL PRIMER PRODUCT

FIS Chemicals Ltd is delighted to confirm that it has acquired the IP, stock and manufacturing rights for Blue Steel Primer (aka Navy Steel Rust Converter) from D. Adam & Associates, making FIS the sole supplier and manufacturer of this popular product.

A widely-used product among FIS customers in Oil & Gas, Marine and other industries, Blue Steel Primer is an aqueous, dual-acting rust treatment which changes the reactive nature of adherent, residual rust by converting it into a stable, blue/black chemical complex firmly bound to underlying iron and steel treated surfaces — leaving them ready primed.

Kenny Woods, CEO at FIS Chemicals:

"We know how much FIS clients across various sectors appreciate this excellent product, and the opportunity to bring it into the FIS catalogue of proprietary products was one we couldn't pass up. The whole FIS team is really looking forward to working with new customers and ensuring continuous, reliable supply of Blue Steel Primer now and in the future."

Existing D. Adam & Associates Blue Steel Primer / Navy Steel Rust Converter have been contacted to inform them of the change in ownership, manufacture and supply. FIS Chemicals encourages any business in energy, marine, industrial, automotive or other relevant industries to contact them with any enquiries about Blue Steel Primer supply.
